

## SkyGuard SkyLine™ - North America to Phase in New Standard

### Features & Specifications

Beginning in early **November 2018**, JLG will transition to a new style of enhanced control panel protection for North America boom lifts.

The new SkyGuard SkyLine maintains the same exclusive SkyGuard reversing technology as the legacy bar style. SkyGuard technology stops all functions in use at the time, then momentarily reverses the function or functions that were in use at the time of activation.

#### **The new SkyGuard SkyLine provides additional unique features:**

- New wire rope-style design, which attaches with a magnet
- Allows for greater visibility of control panel
- SkyGuard technology activates when force applied to the cable causes the magnet to detach
- Designed with no breakaway features that require replacement

**Refer to page 2 for a chart outlining models and target dates to phase into production.** Please note this is subject to change, contact your JLG Sales Representative.

**SkyGuard® SkyBar:** Customers purchasing new machines will have the option to purchase the bar-style SkyGuard system.

Availability in aftermarket may differ. Please contact your JLG Aftermarket Sales Representative for further details.

For more information regarding SkyGuard technology, visit [www.jlg.com/en/destination/skyguard](http://www.jlg.com/en/destination/skyguard).

## Model and Date Phase in Chart

JLG boom lifts will phase in SkyGuard SkyLine as the new standard for enhanced control panel protection. Please reference this chart to determine the targeted effectivity date of your particular model of interest. Dates are subject to change - Please contact your JLG Sales Representative for further details.
