

INTRODUCING CLEARSKY™

ACCESS CONTROL

Operators who aren't properly trained may use your equipment in a way that causes damage or creates a safety risk. Help ensure that only operators with the proper credentials and training can operate your machines. ClearSky Access Control uses a keypad and RFID reader to identify operators using a unique ID number or smart RFID card. If authorized, the operator will gain entry to the machine.

With ClearSky Access Control, you can:

- Enhance worksite safety through qualifications-based authorization
- Utilize actual check-in/check-out tracking and reporting to aid decision making based on usage and operator performance
- Manage users, machine lockout and equipment access conveniently through both over-the-air and local access options
- Save time by uploading up to 2,000 operators at a time into the system through a convenient batching feature

ClearSky Access Control Features

Rugged, glove-friendly keypad, rated to withstand harsh environments

Bright LED display that remains visible in full sunlight

IPAF PAL card-compatible reader

For pricing and to order ClearSky Access Control, visit onlineexpress2.jlg.com or call 877-JLG-LIFT (877-554-5438).

To install and use ClearSky Access Control, you must first have ClearSky telematics installed on your machine. Both ClearSky CAN and ClearSky Dual CAN hardware will support Access Control. Please use the charts below to determine which kit you need.

Kits for Equipment Already Equipped with a ClearSky CAN Device

	MODEL	ACCESS CONTROL KIT PART NUMBER
