ACCESSORIES FOR JLG® EQUIPMENT

Table of Contents

- 05** Boom Lift Accessories
- 08** Scissor Lift Accessories
- 11** Telehandler Accessories

GET MORE OUT OF YOUR FLEET

No matter what challenges the job throws at you, be prepared with accessories for JLG® boom lifts, scissor lifts and telehandlers.

Retrofit your existing equipment with the newest innovations or explore application-specific options that help workers handle tasks like welding at height, transporting bulky materials and more.

Accessories from JLG help increase your ROI by giving operators the tools they need to be more confident and more productive. Designed specifically with the job in mind, these add-ons and options are a cost-effective way to lower your overall total cost of ownership.

**JLG® ACCESSORIES IMPROVE
THE OPERATOR EXPERIENCE BY:**

- Increasing efficiency
- Enhancing safety
- Boosting confidence
- Improving comfort

Boom Lifts

See how to retrofit your boom lift with advanced technologies like SkyGuard® and browse helpful platform options and application-specific packages.

Scissor Lifts

Learn how to add advanced technologies to your scissor lift and explore productivity-boosting options like platform workstations and pipe racks.

Telehandlers

Find accessories for your telehandler, from options that increase operator awareness and security to kits that improve durability for demanding jobs.

BOOM LIFT

ACCESSORIES

With accessory packages and platform add-ons from JLG, your boom lift can take productivity even further. Give boom lift operators the edge during tasks like welding, glazing, drywalling and more.

Advanced Technologies

Retrofit your existing boom lift with one of these advanced technologies that increases operator confidence and improves productivity.

SkyGuard®

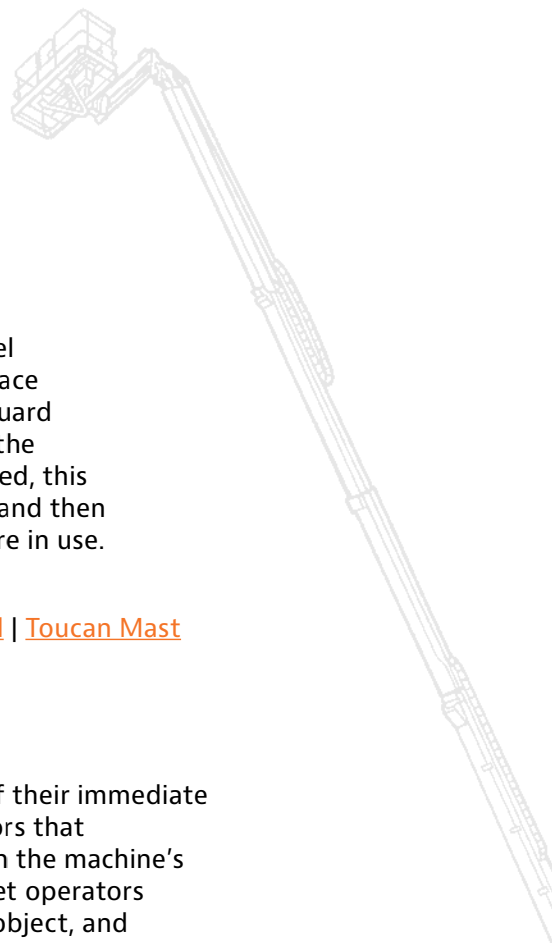

Provides enhanced operator and control panel protection without limiting platform workspace or visibility. If an operator contacts the SkyGuard sensor as they move toward an obstruction, the system emits an audible alarm. When activated, this system stops all functions in use at the time and then temporarily reverses most functions that were in use.

[Compact Crawlers](#) | [Electric](#) | [Engine & Hybrid](#) | [Toucan Mast](#)

SkySense™

Increases a boom lift operator's awareness of their immediate surroundings using strategically placed sensors that establish warning zones and stop distances in the machine's direction of motion. Visual and audio alerts let operators know when the boom lift is approaching an object, and the sensors will automatically direct the machine to slow down and then stop if it gets too close to the object.

Application-Specific Options

When operators need to perform specific tasks at height, like welding reinforcing steel or glazing windows, having the right support can make all the difference. Explore these specialized options from JLG.

Pipe Racks

Maximize platform space and reduce trip hazards by storing pipes and other cylindrical materials on the outside of the platform.

TIRESOCKS®

Protects finished flooring from scuff marks caused by rubber boom lift tires and debris transfer. Constructed of heavy-duty fabric and made to fit any size tire.

SkyGlazier®

Helps protect panels from damage and makes it more efficient to transport materials to the worksite—all while reducing operator fatigue from manual lifting. As the first and only factory-approved glass and panel tray for window glazing at height, it includes:

- A foam-padded railing, a strap to secure panels and a rubber-coated tray, to help prevent damage to panels
- A side-entry platform for improved entry when loading bulky materials

SkyWelder®

Conserves space while providing fully integrated stick and TIG welding capabilities. This package is secured to the platform to help reduce theft. It includes:

- 280-amp Miller® CST 280 welder with a platform-mounted amperage adjustment that provides power to accommodate stick and TIG welding applications
- 100% duty cycle at 200 amps for the versatility to satisfy a variety of applications
- Power supply to the welder and the platform, which allows for use of lights, grinders, drills and other small job site tools without repositioning a ground-based system

Platform Add-Ons

Get more out of your boom lift with our platform add-ons. These helpful features work to enhance the operator experience during general construction, building maintenance and more.

Platform Mesh Kits

Help keep materials and tools inside the platform when an operator is working at height.

Bolt-On Fall Arrest

Uses a cable to allow an operator to leave the boom lift platform and move freely without detaching their safety harness.

Boom Rail Extension

Allows operators to maintain a grip on the platform top railing while creating a buffer space between the operator's hand and objects outside the platform for increased safety.

Mid-Rail Deck

Lets you reach into tight spaces at height by attaching to the inside rail of your boom lift's existing 36" x 96" platform to provide an additional 19.5" of access height.

Fabric Mesh Kits

Help keep materials and tools inside the boom lift platform while providing a clear view of the work area and allowing for better air flow.

SCISSOR LIFT

ACCESSORIES

Optimize your ability to work efficiently at height with JLG® scissor lift accessories. See how you can expand your machine's capabilities with these productivity-boosting options.

Advanced Technologies

Retrofit your existing scissor lift with advanced technology that increases operator confidence, maximizes productivity and enhances efficiency.

SkySense™

Increases a scissor lift operator's awareness of their immediate surroundings using strategically placed sensors that establish warning zones and stop distances in the machine's direction of motion. Visual and audio alerts let operators know when the scissor lift is approaching an object, and the sensors will automatically direct the machine to slow down and then stop if it gets too close to the object.

Application-Specific Options

When operators need to perform specific tasks at height, like installing ductwork or wiring electric, having the right support can make all the difference. Explore these specialized options from JLG.

Pipe Racks

Maximize platform space and reduce trip hazards by storing pipes and other cylindrical materials on the outside of the platform. Pipe racks help keep your tools and materials organized and within reach while maintaining the overall machine width for travel in confined areas.

Plumber's Package

Increases efficiency during plumbing work while helping to prevent rail damage and optimizing platform space. It includes:

- Stowable WorkStation in the Sky™ that provides ample storage for tools and fasteners, available with or without a 12V plug
- A rail-mounted vise for clamping pipes or holding other work materials (select models only)
- Pipe racks for storing pipe outside the platform to reduce trip hazards

Electrician's Package

Increases productivity in electrical contractor applications that require battery-powered tools. It includes:

- Stowable WorkStation in the Sky™ that provides ample storage for tools and fasteners, available with or without a 12V plug
- A rail-mounted vise for clamping conduit while cutting, threading or bending it (select models only)
- An "Electrician's Tree" for wire pulling and reducing friction associated with ground-based wire spools
- Pipe racks for storing pipe outside the platform to reduce trip hazards

Plant Maintenance Package

Provides helpful features for performing a range of facility maintenance tasks. It includes:

- Pipe/conduit racks for storing materials outside the platform to reduce trip hazards
- Stowable WorkStation in the Sky™ that provides ample storage for tools and fasteners and power from a 12V plug
- 5 1/2" bench vise that's essential for securing material while cutting or drilling
- QuikWelder®, a self-contained wire-feed welder that's ideal for spot welding

TIRESOCKS®

Protects finished flooring from scuff marks caused by rubber scissor lift tires and debris transfer. Constructed of heavy-duty fabric and made to fit any size tire.

Platform Add-Ons

Get more out of your scissor lift with our platform add-ons. These options help your team stay organized at height so they can confidently complete jobs like drywalling, painting, HVAC work and general construction tasks.

Inverter Kits

Provide a power source inside the platform that converts DC electricity into AC electricity. This power source can be used to charge power tools, electronics and more while at height.

Fabric Mesh Kits

Help keep materials and tools inside the scissor lift platform while providing a clear view of the work area. They also allow for better air flow through the platform.

WorkStation in the Sky™

Optimizes platform space by integrating common tools and supplies directly into the platform. This option improves efficiency, decreases setup time and eliminates the need for ground-based equipment. Keep tools off the floor and within arm's reach.

QuikAccess Rail

Allows operators to maintain a grip on the platform top railing while creating a buffer space between the operator's hand and objects outside the platform for increased safety.

Material Tray

Organizes tools and materials in the platform so operators can more efficiently perform work at height.

Perimeter Lighting Kit

Provides a perimeter of light around your machine so you can see and be seen on the worksite. Save time in both indoor and outdoor applications by having a lighted perimeter follow along with your machine instead of placing cones around it.

TELEHANDLER

ACCESSORIES

Equip your telehandler with accessories that improve operator comfort, confidence and productivity. When demanding jobs need to be done, JLG® accessories help you get the most out of your telehandler.

Durability & Operation

No matter the applications where they will be used, telehandlers must withstand the rigors of demanding job sites. Explore these accessories designed to keep productivity high all day long even in challenging conditions.

Cold Weather Kit

Controls the temperature of key operating components during harsh winter months. Protect your equipment against hard starts with this kit's battery heater, hydraulic tank heater and engine breather heater.

Fender Kit

Reduces the number of debris thrown into the air from tire rotation. Adding fenders to your telehandler helps protect your equipment investment and keep your telehandler clean.

BrickGuard®

Provides extra protection for your telehandler when lifting brick, block or any other debris that can fall. This kit comes with two separate brick guards—one for the top and one for the front—and does not affect the use of the windshield wiper.

Awareness & Security

We offer telehandler accessories that can increase visibility and operator awareness, as well as secure your equipment from unauthorized operation. See how these advanced, versatile options help protect your investment.

Reverse Sensing Kit

Helps operators remain aware of their surroundings by using pulse radar technology to detect moving and stationary objects. When an object is identified in one of its four detection zones, the system sounds an audible alarm inside the cab.

Backup Camera

Increases operator awareness when backing up. This durable camera option provides an additional view directly behind the machine and magnifies sounds around the equipment.

Multi-View Camera

Increases operator confidence and awareness when they're operating SkyTrak® telehandlers. This system displays multiple views from behind the machine—left, right and rear. It consists of four components: left- and right-side backup cameras, a rear backup camera and a tri-view monitor.

Programmable Security Lock

Prevents unauthorized machine operation by limiting equipment access to only users who enter a four-digit operator's code. Protect your investment with this easy-to-install option that supports up to 99 unique users.

White Noise Alarm

Minimizes machine noise on the job while increasing operator awareness. This alarm emits sound at multiple frequencies attenuated above 4,000 Hz so that the sound appears to dissipate more quickly than a conventional pure-tone alarm.
