

# RAIL PADDING KITS

## SCISSOR ACCESSORIES

### PROTECT EQUIPMENT AND WORK WITH CONFIDENCE

Rail Padding (bumpers) provides an added layer of impact protection for aerial lifts operating in tight or confined spaces. Designed to absorb contact during incidental collisions, it helps reduce damage to equipment and surrounding structures. By minimizing impact-related wear and repairs, rail padding can help reduce maintenance needs and downtime while allowing operators to maneuver more confidently.

### FEATURES AND BENEFITS

- Increased Protection – Adds a cushioned barrier that may help reduce the risk of contact during close-quarter operation
- Noise & Vibration Reduction – Materials help dampen vibration and reduce operational noise.
- Durable Design – High-abrasion materials designed for demanding environments and extended use.
