

FALL ARREST PLATFORMS

RETROFIT KITS

Increase Operator Protection

When your work requires that you exit the platform, JLG helps keep you safe and mobile with our Fall Arrest Platforms. These platforms use a cable system that allows the operator to leave the platform and move freely without detaching the safety harness. This helps keep the operator tethered to the platform at all times.

Features and Benefits:

- Available for a variety of boom lift applications, including aviation and steel erection.
- Full 270 degrees access around and a maximum of 6 ft beyond the platform.
- Allows workers to walk outside the platform.
- Enhances operator protection

NOTES:

- Purchase and installation of platform does not guarantee compliance with all federal, state, and/or local statutes. It is the responsibility of the customer to verify any and all applicable laws that may pertain to their equipment.
- The Operator must use fall protection at all times. A full body harness and shock absorbing lanyard, not to exceed 6 ft in length, are required when using the external fall arrest system.
- The capacity of the External Fall System is 310 lbs./one person maximum.
- Machines with Fall Arrest only. Machines with Soft Touch Fall Arrest have additional counter weighting and tire requirements and may have other additional requirements and prohibited options. Please consult JLG Parts Department for compatibility prior to purchase.
