

PLATFORM SOFT TOUCH KITS

RETROFIT KITS-BOOMS

Protect Your Machine and Surroundings

Protect your machine and surroundings with a Soft Touch Kit from JLG. The soft touch system mounts proximity switches and padding around the platform guardrails and to a frame suspended below the platform. If the proximity switches come in contact with an adjacent object, platform functions are deactivated, increasing protection for the machine and its surroundings. For convenience, an override button permits “undoing”.

FEATURES / BENEFITS

- Increases protection of the machine and its surroundings.
- Designed for use near delicate areas.
- Helps increase the versatility of your machine.
- Kits include instructions and all required components install the Soft Touch to existing machines (applicable models only).

Note: Soft Touch kits are applicable for ANSI and CSA market specification machines only.
