

QUAD TRACKS

SMOOTH PERFORMANCE, TOUGH TERRAIN

Not all jobsites are the same—each presents its own unique challenges and requirements, including whether to use a tracked or wheeled boom lift. Quad tracks combine the advantages of both continuous tracks and wheels, delivering excellent flotation, minimal ground disturbance, enhanced traction, smoother travel over obstacles, and, best of all, eliminating the “breakover” effect.

FEATURES AND BENEFITS:

- Four triangular rubber-track systems that bolt directly onto standard wheel hubs
- Each system measures 34-in high x 54-in long x 18-in wide
- Easily interchangeable with standard tires as needed, or used on other applicable models
- Boosts machine utilization and fleet flexibility by adapting to a variety of job site demands
- Performs across sand, mud, gravel, grass, paved streets with curbs, potholes, and sharp transitions
