

## Protect What is Important with JLG CleanGuard

This environmentally friendly leak containment system features both a tray that is custom fit to the lift cylinder, as well as, two smaller cups that sit under the steer cylinder. CleanGuard does not cover the bottom like a traditional "diaper", but instead focuses on containing the areas where leaks may occur. Designed with the JLG scissor in mind, CleanGuard does not interfere with operation or general servicing, and blends in with the aesthetics of the machine.

### CleanGuard collects drips and leaks from lift and steer cylinders, which:

- Protects delicate surfaces from leaks, stains
- Expands use of machine into places such as museums, data centers
- Lessens risk of environmental hazards
- Reduces risk of slip hazards associated with slick surfaces
- Absorbs 6 oz of fluid
- Installs in minutes and does not require specialty tools
